

BRAND & WEBSITE IMPLEMENTATION GUIDE

Version 1.0

BRAND OVERVIEW

Livevival (RevivalTV Esports Live Score) is a live-score platform for Mobile Legends: Bang Bang S-Tier and A-Tier tournaments. The mark pairs a hummingbird — built from sharp, angular red shards — with a stopwatch ring, signalling speed, precision, and real-time data. This guide documents every logo variant, color, type, and file you need to implement the brand consistently across the website.

Primary Logo Lockup

Use on dark surfaces (default). File: logo-dark-bg.png

Use on light surfaces (docs, press, invoices). File: logo-light-bg.png

ICON SYSTEM

Four icon variants come from the same mark, simplified for different contexts. Never redraw or recombine elements — export from the source files listed below.

App Icon

app-icons/app-icon-*.png

Favicon

favicons/icon-*.png,
favicon.ico

Simple Icon

site-assets/logo/icon.png

Score Indicator

(loading / live spinner motif)

Clear Space & Minimum Size

Keep clear space around the mark equal to the height of the stopwatch tick (the small gap at the top of the ring) on all sides. Minimum digital size: 24px for the icon alone, 120px wide for the full lockup. Below these sizes, use the Simple Icon.

Incorrect Usage

- Do not recolor the bird outside the approved red, or the ring outside white/black.
- Do not stretch, skew, or rotate the mark.
- Do not place the full-color lockup on busy photography without a solid overlay.
- Do not rebuild the wordmark in a different typeface.
- Do not add drop shadows, bevels, or outlines beyond what's specified here.

COLOR PALETTE

Primary

	Name	HEX	RGB	Usage
	Brand Red	#E31E2A	227, 30, 42	Logo, live badges, CTAs, links
	Signal Black	#0A0A0A	10, 10, 10	Page background, header/footer
	Pure White	#FFFFFF	255, 255, 255	Primary text on black, wordmark

Supporting

	Name	HEX	RGB	Usage
	Red Dark	#B3131D	179, 19, 29	Hover / pressed states
	Red Light	#FF4757	255, 71, 87	Live-dot pulse, highlights
	Surface	#141414	20, 20, 20	Cards, panels, table rows
	Border	#1F1F1F	31, 31, 31	Dividers on black surfaces
	Muted Text	#8A8A8A	138, 138, 138	Secondary text, timestamps

Status

	Name	HEX	RGB	Usage
	Win	#2ECC71	46, 204, 113	Win indicator, positive net worth
	Loss	#E31E2A	227, 30, 42	Loss indicator, negative net worth
	Draw / Neutral	#8A8A8A	138, 138, 138	Draw, TBD, upcoming match

All tokens are defined once in `tokens.css` as CSS custom properties, so the whole site can be re-themed by editing a single file.

TYPOGRAPHY

Display / Headings — Rajdhani

A condensed, technical grotesque that echoes the squared-off lettering in the wordmark. Use for page titles, section headers, scoreboard numerals, and team names. Weights: 600 (Semibold) for headings, 700 (Bold) for scores and countdowns. Set in uppercase with +0.04em letter-spacing to match the logo.

Body / UI — Inter

A neutral, highly legible grotesque for body copy, navigation, form labels, and tooltips. Weights: 400 (Regular) body text, 500 (Medium) UI labels, 600–700 for emphasis and buttons.

Monospace — JetBrains Mono

Used only for figures that must align in fixed-width columns: match timers, exact KDA, gold/net-worth differentials, and countdown clocks.

Token	Font / Weight	Size	Use
display-xl	Rajdhani 700	40 / 48px	Hero titles
display-lg	Rajdhani 600	28 / 34px	Page section headers
display-md	Rajdhani 600	20 / 26px	Card titles, team names
body-md	Inter 400	15 / 22px	Paragraphs
body-sm	Inter 500	13 / 18px	Labels, meta text
mono-score	JetBrains Mono 600	18 / 22px	Live scores, timers

FAVICON & APP ICON PACKAGE

Every required size has already been exported and is included in the ZIP. Drop the folders into your site's public/root directory as-is.

Folder	Contents	Where it's used
/favicons	favicon.ico, icon-16 to icon-512, apple-touch-icon.png, android-chrome-192/512.png	Browser tab, bookmarks, iOS/Android home screen
/app-icons	app-icon-57 to app-icon-1024.png	PWA manifest, app-store style listings, future native app
/social	og-image-1200x630.png, profile-800x800.png	Open Graph / Twitter card previews, social profile photo
/logo	logo-dark-bg.png, logo-light-bg.png, icon.png, app-icon-badge.png	Website header, footer, press kit, docs

site.webmanifest

A ready-to-use PWA manifest is included, pointing at the Android Chrome icons and set to Livevival's black background / red theme color.

head-snippet.html

Paste this directly inside your site's <head>. It wires up every favicon size, the manifest, theme-color, Open Graph and Twitter card tags, and the Google Fonts used in tokens.css. Two placeholder domain URLs are marked TODO — update them before launch.

WEBSITE IMPLEMENTATION CHECKLIST

1. Unzip assets

Place /favicons, /app-icons, /social, /logo, tokens.css, and site.webmanifest into your project's public/ (or static/) root.

2. Wire up the

Paste head-snippet.html into your layout/template's , updating the two TODO domain URLs.

3. Import tokens.css

Link or import tokens.css site-wide, then reference var(--lv-red), var(--lv-bg), etc. instead of hard-coded colors.

4. Load fonts

Rajdhani, Inter, and JetBrains Mono are pulled via Google Fonts in head-snippet.html. Self-host later for performance if needed.

5. Header logo

Use logo-dark-bg.png (or icon.png at small widths) in the site header; swap to logo-light-bg.png only on white surfaces.

6. Favicon test

After deploying, verify the tab icon and hard-refresh (favicons are aggressively cached by browsers).

7. Social preview test

Test og-image-1200x630.png with Facebook's Sharing Debugger and Twitter's Card Validator.

8. PWA manifest

Link site.webmanifest in the head (already included in head-snippet.html) so mobile users can 'Add to Home Screen' with the correct icon.

Once you upload the ZIP back into this chat, Claude can implement all of this directly into your Livevival codebase — header/footer components, the <head> tags, tokens.css import, and the PWA manifest.
